Sustainable Solutions to Protect Our Environment

December 28, 2016

The Honorable Steve Englebright
Chair, New York Assembly Environmental Conservation Committee
Legislative Office Building 621
Albany, NY 12248

RE: Support for A.6199C (same as S4926-C): Relates to establishing the paint stewardship program

Dear Chairman Englebright and members of the Environmental Conservation Committee:

The New York Product Stewardship Council (NYPSC), the Product Stewardship Institute (PSI), and the 27 local governments, municipal and industry associations, and environmental groups that are signees of this letter strongly support A.6199C (Stirpe) to establish a paint stewardship program in New York State.

Nearly 4 million gallons of leftover paint are generated annually in New York State. Local governments would need to spend \$31 million to properly manage this waste stream. Enacting Assembly Bill 6199C relieves financial burdens on municipalities, establishes new convenient locations for residents to drop off their paint, increases paint reuse and recycling, and creates recycling-sector jobs. Upon passage of the paint stewardship law, several NY State businesses are ready to expand or launch operations to process this material.

Today's reality, without a paint stewardship program, is that municipalities spend about 50% of their Household Hazardous Waste budgets to manage a small fraction of leftover paint. Despite the efforts of local government, which spend an estimated \$3.1 million each year to manage paint, most leftover paint is disposed of in the garbage.

A.6199C is actively supported by local government agencies, the American Coatings Association, and environmental groups. When passed, PaintCare, an industry non-profit, would manage the paint through funds collected by the program, thus freeing municipalities and the state agency of much of the management and financial burden.

A.6199C is consistent with paint stewardship laws passed in eight states and Washington D.C. – including Connecticut, Maine, Rhode Island, and Vermont – which produced the following early results:

- Saved taxpayers over \$69 million, created over 200 jobs, and led to recycling over 17 million gallons of high quality paint (a majority of which is recycled back into paint).
- Created more than 1,700 voluntary retail collection sites, providing far greater convenience to residents and decreasing the burden on local government programs.

The Paint Stewardship Program (A.6199C) represents a tremendous opportunity to work with the industry to benefit New York municipalities financially, socially, and environmentally. **We urge your support.**

Respectfully,
